

UI Developer Technical Test

The task:

Recreate the attached mock up in HTML/CSS from a blank page.

Layout should be fluid (adapts to any window size, but NOT responsive).

The exercise should take no more than one day to complete.

1. Add backgrounds/images to all the fields to make an interesting layout.
(online/personal work/any other art is ok to use as well).
2. Be prepared to discuss/defend your implementation in the onsite interview
3. Be prepared to make changes to your layout on site as part of an additional test.

Coding Requirements

1. Create an external JSON file that will hold all the data for your sale.
2. JSON file should contain the following data:
 - a. Image name to be used in the header. Your sale display the header (Section 1) defined here.
 - b. Timestamp for sale end date and time. This will be used to display a timer with the number of days or hours left until the sale ends.
 - c. Sales item data will be used to display items in Section 3 (see image below).
 - i. Each sales item in your data should contain:
 - ii. Displayed Label for the sale item.
 - iii. Image icon for the sale item.
3. All image paths used in your JSON data should point to images in an images folder within your project folder. For example, if your header was bigsale.png, the JSON data should point to images/bigsale.png
4. Your item list should display all sales items found in the JSON file and display the appropriate text and icon for each. Display at least 3 items.
5. Include all asset files used (Images, CSS, JS) together in a zip file and upload it to Google drive.

Duration of test: 24H
